

Presbyterian New Mexico Healthcare Services Improves Clinical Outcomes in Diabetic Patient Population using DocSite Enterprise™

Together We Can

- * Save you time and money
- * Maximize P4P opportunities
- * Increase per patient revenue
- * Improve quality healthcare
- * Enhance the value you provide members
- * Provide decision support at the point-of-care
- * Easily measure & report

“Rave reviews from the staff and docs. We are having trouble keeping up with the spread and the ways people want to use it.”

**- Mike Nelson, M.D.
Medical Director of QI
Presbyterian New Mexico
Healthcare Services
Albuquerque, New Mexico**

Profile:

Clinically Integrated 350-physician PHO serving an urban and rural patient population

Challenge:

Presbyterian New Mexico Healthcare Services experienced significant improvements in reducing the number of diabetic patients in “poor A1c control” before experiencing a leveling-off in results through an internal initiative. Confidant they had taken every internal step possible to achieve their goals, Presbyterian New Mexico conducted an exhaustive analysis of available Electronic Medical Record systems finding none providing the out-of-the-box functionality required to solve their clinical challenges.

DocSite Solution:

DocSite Enterprise™ provided their clinicians a patient-centric registry ideally suited to managing patients with single or multiple chronic conditions, and delivered evidenced-based decision support in the treatment room enhancing patient care. Additionally, automated patient “follow-up” letters involve patients in their care plan acting both as a reminder and report card for progress.

DocSite Connect™ enabled them to quickly and cost effectively integrate with other health information technologies, as well as consolidating reporting across their vast organization.

Valuable Results:

Implementation took 60 days, and within 150 days patients in “poor control” were reduced from 22% to 12%, 3% less than the original goal for that year. Presbyterian New Mexico is currently exploring expanding their diabetes program to non-system physicians throughout New Mexico as part of a community-based diabetes health initiative in under-served areas.

DocSite Products Used:

DocSite Enterprise™ - Registries, reporting and decision support for large organizations

DocSite Connect™ - Clinical data warehouse and systems integration
